Disclaimer

The information contained in the Document is for general information purposes only.

The Company assumes no responsibility for errors or omissions in the contents of the Document.

In no event shall the Company be liable for any special, direct, indirect, consequential, or incidental damages or any damages whatsoever, whether in an action of contract, negligence, or other torts, arising out of or in connection with the use of the contents of the Document. The Company reserves the right to make additions, deletions, or modifications to the contents in the Document at any time without prior notice.

Errors and Omissions Disclaimer

The information given by the Document is for general guidance on matters of interest only. Therefore, errors can occur even if the Company takes every precaution to ensure that the Document's content is current and accurate. Plus, given the changing nature of laws, rules, and regulations, there may be delays, omissions, or inaccuracies in the information contained in the Document.

The Company is not responsible for any errors or omissions, or for the results obtained from the use of this information.

Fair Use Disclaimer

The Company may use copyrighted material that the copyright owner has not explicitly authorized. The Company is making such material available for criticism, comment, news reporting, teaching, scholarship, or research.

The Company believes this constitutes a "fair use" of any such copyrighted material as provided for in section 107 of the United States Copyright law.

If You wish to use copyrighted material from the Document for your own purposes that go beyond fair use, You must obtain permission from the copyright owner.

"Use at Your Own Risk" Disclaimer

All information in the Document is provided "as is", with no guarantee of completeness, accuracy, timeliness or of the results obtained from the use of this information, and without warranty of any kind, express or implied, including, but not limited to warranties of performance, merchantability and fitness for a particular purpose.

The Company will not be liable to You or anyone else for any decision made or action taken in reliance on the information given by the Service or for any consequential, special or similar damages, even if advised of the possibility of such damages.

Introduction

A QR code is the shortest way from a screen or a printed sheet to a smartphone: a link to a document, the contact details of an employee, access to the guest Wi-Fi, an invitation to an event. Usually such codes are made on public websites, which means that an internal link, a phone number or a network password is typed into a service that nobody in the company controls. QR Code Generator brings this task into SharePoint: the code is built in the browser of the user, on a page of your own intranet.

QR Code Generator is a **SharePoint Framework** web part for modern **SharePoint Online** pages and **Microsoft Teams**. This article introduces the solution: where it works, what the user sees, which data can be encoded, how the code can be styled and how the result is taken out of the page.

The QR Code Generator web part on a SharePoint Online page

Where QR Code Generator works

QR Code Generator is deployed to a Microsoft 365 tenant from the **app catalog** as a single package and becomes available on every site of the tenant. The web part can be placed:

- on any modern page — a site page, a news post or a home page, in a regular section or in a full-width section;
- on a single-part **app page**, where the generator is the only content of the page;
- as a tab in a Microsoft Teams channel or as a personal app in Teams.

The web part follows the theme of the site, including dark themes and the color variants of a page section. Its interface is available in 50 languages and is selected automatically from the language of the user.

Note

QR Code Generator supports modern pages only. It cannot be added to classic pages.

What the user sees

The web part has two areas. On the left are the **data tabs** — one tab for each type of data — and, below them, seven collapsible **design sections**: **Shape**, **Logo**, **Colors**, **Corner Square**, **Corner Dots**, **Error Correction** and **Size**. On the right is the **QR code** preview with three buttons: **Update**, **Copy** and **Download**.

The preview is rebuilt after every change, so the user sees the result while typing. If a required field of the selected tab is empty, the preview is replaced by a message that one or more required fields is empty, and the buttons are disabled until the field is filled in.

All settings of the generator are in the web part itself. The property pane contains only the **About** group with the license information.

Data types

The web part encodes nine types of data. The type is chosen by the tab, and the smartphone decides what to do with the scanned code by its content.

Tab	What is encoded	What happens after scanning
URL	The address of a web page	The page opens in the browser
Text	Any plain text	The text is shown on the screen
vCard	A business card: name, phones, email, company, department, job title, website and postal address	A new contact is offered for the address book
Wi-Fi	Network name, password, encryption type and the	The phone connects to the network

Tab	What is encoded	What happens after scanning
	hidden network flag	
Email	Recipient, subject and message	The mail app opens with a prepared message
SMS	Phone number and message	The messaging app opens with a prepared message
Phone	Phone number	The phone offers to call the number
Location	Latitude and longitude	The point opens in the maps app
Event	Title, location, start and end	The event is offered for the calendar

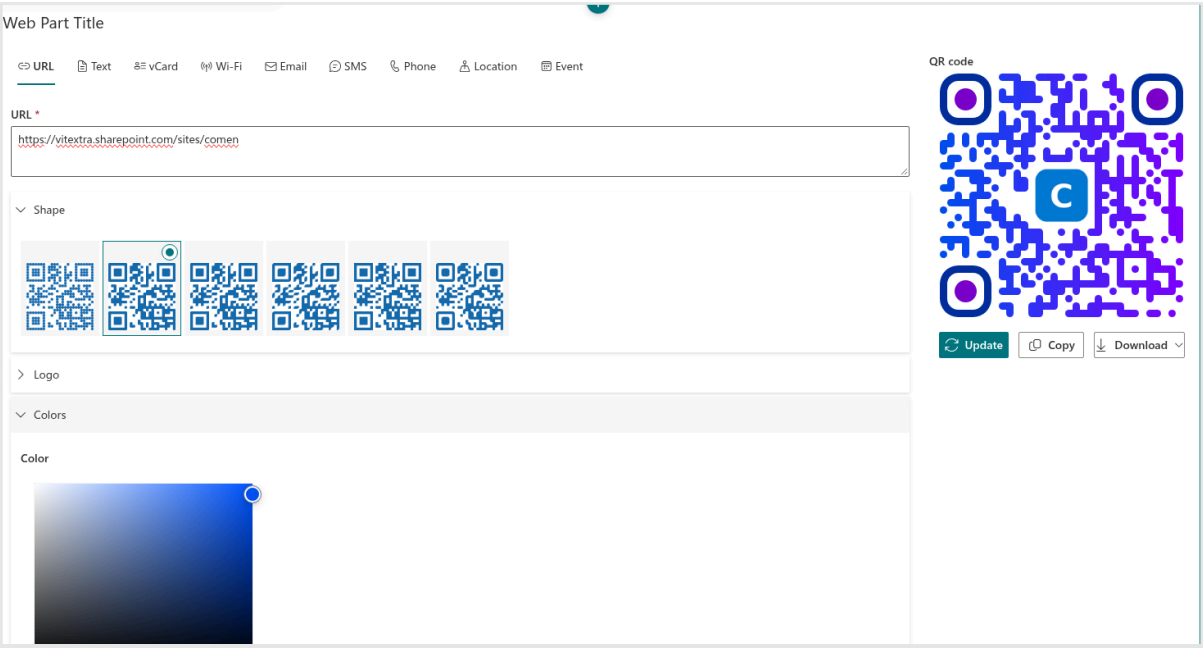

The fields of each tab are described in KB10264. QR Code Data Types: URL, Text, vCard, Wi-Fi, Email, SMS, Phone, Location and Event.

Design

A code generated by the web part does not have to be black and white. The design sections bring it in line with the corporate style:

- **Shape** — six styles of the dots that form the code, each shown as a picture;
- **Colors** — the color of the dots and of the background, both with transparency, and an optional linear or radial two-color gradient;
- **Corner Square** and **Corner Dots** — the shape and color of the three position markers in the corners of the code;
- **Logo** — a company logo in the center of the code, with adjustable size and margin;
- **Error Correction** — how much of the code may be damaged or covered and still be read;
- **Size** — the size of the downloaded image, from 300 to 4000 pixels.

See KB10265. Customizing the QR Code Design: Shape, Colors, Gradient and Corners and KB10266. How to Add a Company Logo to a QR Code.

A QR code styled with a custom shape, gradient and logo

Getting the result

The **Download** button saves the code as a file in one of four formats: **PNG**, **JPEG**, **SVG** or **WebP**. SVG is a vector format and can be printed at any size without loss of quality. The **Copy** button puts the code on the clipboard as a PNG image, ready to be pasted into an email, a document or a presentation. Details are in KB10267. Downloading and Copying a QR Code: PNG, JPEG, SVG and WebP.

A configuration saved with the page

Everything that is set up in the web part while the page is being edited — the selected tab, the entered data, the colors, the shape, the logo and the size — is saved together with the page. A page author prepares a code once, for example the guest Wi-Fi of a meeting room, and every visitor of the page sees this code at once. See KB10268. Publishing a Preconfigured QR Code on a SharePoint Page.

Privacy

The QR code is generated entirely in the browser. The data that the user enters — passwords, contacts, coordinates — is not sent to an external service for generation. The package requests no additional API permissions, so there is nothing to approve on the **API access** page of the SharePoint admin center.

Warning

A configuration saved with the page is stored in the properties of the web part as plain text. Anyone who can open the page can read the saved data, including a Wi-Fi password. Publish codes with sensitive data only on pages with a suitable audience.

Licensing

QR Code Generator is installed with a trial period. The **About** group of the property pane shows the **Status** of the license, the **Version** of the web part, the **Start Date** of the subscription and the **Tenant** it is assigned to. When the trial ends, the web part shows a notice in place of the generator until a subscription is activated.

Next steps

Tip

To deploy the package, place the web part on a page and build the first code, see KB10263. How to Add QR Code Generator to a Page and Create Your First QR Code.

Terms

App Catalog
The App Catalog is a special SharePoint site that stores apps for SharePoint, Teams, and other Microsoft 365 services. Global or SharePoint administrators can upload and manage applications from the AppSource marketplace, custom-developed apps, or third-party apps for the organization's internal use. There can be only one tenant-level App Catalog in a tenant; site collection app catalogs can be added for individual site collections.

App Page
An app page in SharePoint Online is a specialized type of page designed to host a single web part or app. It provides a focused, full-page experience dedicated to a specific functionality, allowing the app to use the entire page space without other distractions. This layout is ideal for scenarios requiring a large amount of data display or complex interactions, such as dashboards, data entry forms, or detailed reports.

Microsoft Teams
Microsoft Teams is a chat-based collaboration platform for business communications with features for online meetings, live events, and document sharing.

SharePoint Framework (SPFx)
SharePoint Framework (SPFx) is a model for building client-side web parts, components, and extensions for SharePoint Online, SharePoint Server (on-premises), and Microsoft Teams. SPFx customizations are based on JavaScript and support the modern user interface natively.

SharePoint Online
The cloud version of SharePoint, a web-based collaboration platform within Microsoft 365 that provides an extensive range of capabilities to store, share, and manage the digital information, content, and knowledge of an organization.
